1. Create 2 lists named "even" & "Odd. Then read a number from the user and check whether it is an even or odd number by using user defined function "check" and store it to the corresponding list and display it
2. Read the string "INDIA IS MY COUNTRY" from the user and slice the word "INDIA" and send that sliced word to your email

(Note : You have to push the source code with output screenshots to GitHub and also do versioning)
